

WEEKLY REPORT

Dear Amro Gamar

In the below Table you will see a specified table that includes the good, the bad & the improvements that can be done on your Classification Task

Correctly Done	Can Be Improved
<ul style="list-style-type: none"> • Handle Outlier • Encoding • Feature engineering • Applying Good Algorithms 	<ul style="list-style-type: none"> • Scaling • You can apply other techniques for outlier as transformation (log), capping, fill by median (try and determine the good one) • Handle multicollinearity using drop cols with high vif or pca (not necessary to increase performance, the integrity will be) • You can try encoding using one-hot, label or manual encoder as type1:1, type2:2,... • You can use more robust models as random forest, xgboost, adaboost, .. • You can use grid-search for more hyper tuning • You can apply cross-validation to know genera performance of model on all data • Split data into train and test before any preprocessing • Handle Imbalanced
